

**ABSTRACT OF THE DISCLOSURE**

1 A plank panel for covering fronts of electronic equipment racks  
2 consists of preferably three face plates separable via a break-  
3 off groove such that the plank panel may be easily reduced to a  
4 lesser height. The face plates provide slots for fasteners  
5 that slide in from the side and are adjustable to slight  
6 dimensional discrepancies and various configurations of the  
7 mounting holes of various rack systems.
